DETAILED ACTION

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Bill Francis on 03/26/2009.

The application has been amended as follows: claim 27 has been replaced as follows:

27. (Currently Amended)

A fuel tank, comprising:

a shell of a first polymeric material and defining an interior for holding fuel and having an opening for receiving fuel into the interior and a vapor barrier layer of a second polymeric material different than the first polymeric material and adhered to the first polymeric material;

a separate one-piece fuel fill nipple having an outer surface and an inner surface defining a passage extending between a pair of generally opposed open ends of the fill nipple with one end at least partially overlapped with and attached to the shell with the passage aligned with the opening allowing fuel to flow through the passage and into the interior of the shell, the fill nipple has an inner layer of polymeric material forming the inner surface of the fill nipple, an outer layer of polymeric material forming the outer

surface of the fill nipple, and a vapor barrier layer of a polymeric material between and adhered to the inner and outer layers and separate from the shell vapor barrier layer, wherein the fill nipple vapor barrier layer overlies the shell vapor barrier layer along the entire extent of the overlap of the fill nipple and shell providing two vapor barrier layers along the entire extent of the overlap of the fill nipple and shell with at least a portion of the overlapped two vapor barrier layers being spaced apart circumferentially continuously around the opening of the shell; and

the first polymeric material of the shell and the inner layer of polymeric material of the fill nipple are of the same polymeric material and are welded together circumferentially continuously around the opening of the shell.
